1 Pokemon GO and Nintendo

I used 'pandas' in Python to get the data of Nintendo stock price from 1999 to now, and printed it out below.

A few months ago 'Pokemon GO' became very popular among people all over the world and many articles said that it would cause Nitendo's revival. From the chart, however, stock prices just recovered to level of 2010. The increase in the stock price caused by the release of 'Pokemon GO' was not a special phenomenon in Nintendo's history. It means that it is not Pokemon GO's success but what services Nintendo can provide next that counts.
